25X1

1. Fuel for the new Soviet tank depot at the southern end of the island is supplied tank cars. Three to five railroad tank cars with a red flag were observed at the end of the tracks southwest of the base of the west jetty at almost any time. From this point the fuel is pumped through a pipeline into the four fuel tanks on the hill near Dwasleden. Three separate pipelines are laid in a pipeline canal which is about a man's height and almost a meter wide. Two of these pipelines carry the fuel from the fuel tanks to the filling points at the harbor berths of the Sea Police in the harbor. The tanks are half-sunk in the earth, they project about 1.5 meters above the ground and are all earth-covered.
2. The single-floor preheating house, about 15 meters long and 6 to 7 meters wide, is located near the mouth of the Grundbachtal (a valley). It houses a small boiler which produces the steam for preheating the oil and operating the pump.
3. A second boiler house for the Sea Police is under construction close to the heating house at the southern end of the island.
